Multi-URL Platform User Flow Summary

BT Education Ministry — Routing, Access Control, and Development Directives for Agent Execution

This document summarizes the uploaded sitemap and user flow into implementation-ready directives for Head Steward / Claude and Tech Agent / Claude. It defines the domain architecture, access tiers, route hierarchy, and control requirements needed for accurate deployment and testing.

I. Platform Architecture Overview

The platform is divided into three functional layers. Each layer serves a distinct purpose and must remain logically separated while working together through unified authentication and routing.

Layer	Domain / Subdomain	Purpose	Primary User Context
Public Front-End	`educationministry.org` `btpma.org`	Public-facing ministry presence, awareness, outreach, and entry point to secure services	Visitors, prospects, public users
Central Authentication + Member Portal	`platform.btpma.org/login` `platform.btpma.org/member-portal`	Secure login gateway and post-auth access hub for members, subscribers, and administrators	Admin, PMA users, trial users
Operational Dashboard	`aemp-dashboard.btpma.org`	Mission control environment for ministry strategy, execution, measurement, impact, and workspaces	Admin and dashboard-authorized users

II. Core User Entry Flow

Step	User Action	System Response
1	User arrives from public site	User begins at `educationministry.org` or `btpma.org`
2	User chooses secure access	User is directed to `platform.btpma.org/login`
3	User authenticates successfully	User is routed to `platform.btpma.org/member-portal`
4	Portal renders role-based navigation	Visible cards and links differ by access tier: Admin, PMA Subscription, or Trial
5		

	User selects a tool, workspace, or dashboard destination	System routes user to the correct platform or dashboard URL according to permissions

III. Access Tier Model

The sitemap defines three access classes using symbol logic. This should be implemented as role-based access control with explicit entitlement checks.

Tier	Legend	Meaning	Access Scope
Admin User	*	All Access Pass	Full access to Member Portal, AEMP Dashboard, Mission Control, Knowledge Vault, Vision, Inspire, Measure, Impact, and all functional workspaces
PMA User	**	Monthly / Yearly Subscription Access	Access to Member Portal plus subscribed modules such as Educate, Head Steward AI, Sales Hub Directive, and Schedule a Consultation
Trial User	***	Trial Access Only	Limited access via Member Portal, primarily to Educate module only

Development Directive: The Member Portal must render links dynamically based on entitlement. Users must not see links they are not authorized to access. Route visibility and route access control must both be enforced.

IV. Admin Route Map — AEMP Dashboard

Admin users enter the Member Portal and require access to the dashboard ecosystem hosted on `aemp-dashboard.btpma.org`.

Section	URL	Function
Mission Control (Main)	`aemp-dashboard.btpma.org/mc`	Main operational dashboard entry point
Mission Vision	`aemp-dashboard.btpma.org/vision`	Strategic planning, canvas, rocks, capabilities, features, enablers
Inspire / How We Work Together	`aemp-dashboard.btpma.org/inspire`	Execution coordination, workspace rollups, ministry collaboration view
Measure	`aemp-dashboard.btpma.org/measure`	Performance, progress, analytics, metrics
Impact	`aemp-dashboard.btpma.org/impact`	Outcome tracking and impact review

Knowledge Vault	`aemp-dashboard.btpma.org/knowledge-vault`	Research, learning assets, stored operational knowledge

V. Functional Workspace Route Map

These routes represent the ministry's functional workspaces. They should exist as dedicated operational areas under the dashboard subdomain.

Workspace	URL	Purpose
Operations Workspace	`aemp-dashboard.btpma.org/operations`	Operational management, execution tasks, and support coordination
Technology & Innovation Workspace	`aemp-dashboard.btpma.org/technology-innovation`	Platform development, technical backlog, systems enhancement
Research, Learning & Development Workspace	`aemp-dashboard.btpma.org/research-learning-development`	R&D, educational assets, knowledge development
Trust Services Workspace	`aemp-dashboard.btpma.org/trust-services`	Estate governance and trust-related operational services

VI. PMA User Route Map

PMA users authenticate through the platform portal and access subscription-based tools. These remain under the platform subdomain rather than the dashboard subdomain unless future architecture changes require consolidation.

Module	URL	Access Class
Member Portal	`platform.btpma.org/member-portal`	Subscription user landing hub
Educate	`platform.btpma.org/educate`	Subscription + trial visible
Head Steward AI	`platform.btpma.org/head-steward-ai`	Subscription access
Sales Hub Directive	`platform.btpma.org/sales-hub-directive`	Subscription access
Schedule a Consultation	`platform.btpma.org/schedule-a-consultation`	Subscription / utility access

VII. Trial User Route Map

Module	URL	Access Class
Member Portal	`platform.btpma.org/member-portal`	Limited portal entry
Educate	`platform.btpma.org/educate`	Trial-visible module

VIII. Required Development Logic

1. Cross-Subdomain Authentication

- Authentication must persist across `platform.btpma.org` and `aemp-dashboard.btpma.org`.
- A user authenticated on the platform should not be forced to log in again when routed to the dashboard.
- Session or token configuration must be valid across authorized `*.btpma.org` subdomains.

2. Dynamic Member Portal Rendering

- The Member Portal must show only the cards and links permitted for the authenticated user's role and entitlement set.
- Admin should see dashboard-related destinations.
- PMA users should see subscribed services only.
- Trial users should see limited trial destinations only.

3. Route Hardening

- All card links and navigation items must match the sitemap URLs exactly.
- Broken or placeholder links must be removed or corrected before deployment.
- Unauthorized direct URL entry must return a proper denied state or redirect.

4. Semantic Alignment

- The route `/inspire` must be presented as **How We Work Together**.
- The dashboard must reflect the sitemap hierarchy, not improvised naming conventions.

5. Workspace Isolation with Controlled Visibility

- Admin users may view all workspaces.
- Future role-specific users should be routed directly to their assigned workspace.
- Workspaces should remain isolated in terms of navigation permissions while still contributing to rollup views such as Inspire.

IX. Precise Directives to Development Team

Directive	Required Action
Authentication	Implement or verify shared authentication across platform and dashboard subdomains
Portal Logic	Render Member Portal cards dynamically based on Admin, PMA, or Trial access
Admin Navigation	Ensure Admin sees Mission Control, Vision, Inspire, Measure, Impact, Knowledge Vault, and workspaces
PMA Navigation	Restrict PMA users to subscribed modules on platform subdomain
Trial Navigation	Restrict trial users to Educate and limited portal context only
URL Integrity	Verify all routes match sitemap exactly and remove broken path references
Header / Page Labels	Ensure UI labels align with sitemap semantics, especially Inspire → How We Work Together
Workspace Architecture	Maintain dedicated workspace routes under the dashboard subdomain
Security	Block unauthorized direct access to routes through server-side and client-side checks

Final Instruction: The development team should treat the uploaded sitemap as the routing authority for cross-domain navigation, role-based access visibility, and semantic page naming. The Member Portal is the control gate. The AEMP Dashboard is the operational system. Public sites are the outer acquisition layer. Build and test accordingly.
