RL&D Implementation Guide: Knowledge Vault vs Platform Offerings

Purpose: Immediate implementation of the operational distinction between (1) the internal Knowledge Vault (R&D) and (2) external Platform Offerings (Learning delivery via LMS).
Scope: Ministry Function C (Learning & Development) and AEMP Dashboard tracking.

Non-negotiable distinction:
Knowledge Vault = Internal Research & Development (the “R” of RL&D). You build, store, and protect value in perpetuity.
Platform Offerings = External Learning delivery (the “L” of RL&D). You distill Vault IP into courseware delivered through LMS tools (Skool-like experience).

I. RL&D Framework (Top-Level)

Component	Knowledge Vault (R&D)	Platform Offerings (Learning Delivery)
Entity	Internal Intellectual Property (IP) repository	Tiered educational delivery system (LMS)
Purpose	Preserve and compound ministry intellectual capital in perpetuity	Teach, practice, and credential learner outcomes
Access	Restricted (internal roles; optionally gated Elite/Fiduciary)	Tiered (Seeker/Operator/ Builder Architect/Fiduciary) per offer rules
Content type	Raw transcripts, primary sources, research notes, internal whitepapers, precedent packs	Micro-lessons, quizzes, drills, worksheets, assignments, cohort/live sessions, vault-derived templates
Core KPI	IP growth + indexing quality (ingestion throughput, taxonomy integrity)	Mastery + retention (heatmap progression, completion, renewals)
Examples (from your program)	“As Above, So Below” transcripts and R&D extractions	Young Civic Architect Program; Intro to Civic Engagement (starter courseware)

II. Knowledge Vault (Internal R&D) — Operating Definition

Vision & Mission (internal)

Vision: To be the immutable repository of civic research and ministry IP, preserved and protected for generations.
Mission: To systematically collect, categorize, and protect raw research and structured analyses as the source-of-truth for all platform offerings.

Vault asset classes (minimum viable taxonomy)

- **Raw sources:** transcripts, audio notes, research PDFs, primary legal texts.
- **Extractions:** definitions, canon applications, authority traces, checklists, argument maps.
- **Playbooks (internal):** SOP drafts, decision matrices, escalation frameworks.
- **Precedent packs:** sample templates, redlines, annotated exemplars (kept gated).

Vault pipeline (R&D workflow)

Stage	Input	Output	Owner (function)
Ingest	Raw transcript / source material	Indexed file with metadata	RL&D (R) / Ops support
Normalize	Indexed raw material	Clean text + segment map	RL&D (R)
Extract	Segmented material	Definitions, checklists, doctrine notes, issue trees	RL&D (R)
Package	Extracted artifacts	Vault “Asset Pack” (tagged + versioned)	RL&D (R) + Tech
Protect	Asset Pack	Access controls + audit log + retention	Tech + Ops

III. Platform Offerings (External Learning) — Operating Definition

Vision & Mission (learner-facing)

Vision: To deliver a structured, interactive learning experience that turns research into mastery through disciplined practice.
Mission: To distill Vault IP into tiered, Skool-like courseware with activities, assessments, and community delivery aligned to the Civic Architect journey.

Platform content primitives (what must exist)

- **Programs/Courses:** e.g., Young Civic Architect; Intro to Civic Engagement.
- **Lessons:** short videos + written summaries + anchors + definitions.
- **Activities:** worksheets, drills, roleplays, audits (graded or self-check).
- **Assessments:** quizzes, milestone submissions, heatmap scoring events.
- **Community mechanics:** cohort prompts, office-hours/live workshops, vault recordings.

Platform pipeline (Learning delivery workflow)

Stage	Input	Output	Owner (function)
Select	Vault Asset Pack	Lesson spec (objective + activity + assessment)	RL&D (L)
Distill	Lesson spec	Script + slides + worksheet + rubric	RL&D (L)
Produce	Script package	Video + downloadable assets	RL&D (L) + Tech
Publish	Produced content	Course module released (tier-gated)	Tech + Ops
Measure	Learner activity signals	Heatmap deltas + retention insights	AEMP / Ops

IV. Ministry Function C Update: RL&D (Research + Learning)

Sub-function	Internal (R&D = Vault)	External (Learning = Platform)
Primary output	Protected IP packs (source-of-truth)	Courseware + mastery outcomes
Cadence	Continuous ingestion + versioning	Release schedule + cohort calendar
Quality control	Taxonomy integrity + version control	Learning objectives + assessment validity
Protection		

	Access control, audit logs, retention policy	Tier permissions + download controls

V. AEMP Dashboard Implementation (Two Pipelines)

AEMP must show two distinct pipelines and never conflate them:

- **Vault Pipeline (R&D):** ingest → normalize → extract → package → protect.
- **Platform Pipeline (Learning):** select → distill → produce → publish → measure.

Minimum dashboard widgets

- **Vault throughput:** items ingested/week, % normalized, % packaged.
- **Platform release train:** modules in production, modules published, next release date.
- **Entitlements:** which tiers can access which assets (policy view).
- **Audit log:** who accessed or exported Vault packs (internal security control).

VI. Immediate Implementation Checklist (14-day)

Day	Vault (R&D) tasks	Platform (Learning) tasks
1–3	Finalize Vault taxonomy + metadata fields; set access roles.	Finalize course list (Young Civic Architect; Intro to Civic Engagement) + module objectives.
4–7	Ingest priority source materials; normalize and segment.	Convert 1 Vault pack into 1 course module (lesson + worksheet + quiz).
8–10	Package first Asset Packs; version and lock.	Publish first module; configure tier permissions; enable measurements.
11–14	Stand up audit logging and export controls.	Validate heatmap signals + completion events; draft release cadence.

Document intent: operational separation of internal IP (Vault) versus external courseware (Platform) for immediate build decisions and AEMP dashboard implementation.
